

NUTRAPLEX[®] FIRM-UP

A Calcium Induced Firmness System for Fruit and Vegetable Crops

GUARANTEED ANALYSIS

Calcium (Ca)8.0%
Boron (B)0.5%

Derived From Calcium Chloride and Sodium Borate.

Maximum Chlorine Content 16%

Information regarding the contents and levels of metals in this product is available on the internet at <http://www.aapfco.org/metals.html>

PRODUCT INFORMATION

CROPS

NUTRAPLEX FIRM-UP can be applied to most vegetable crops, row crops, deciduous fruit and nut trees, citrus, avocados, grapes, melons, ornamentals, turf, pasture, range grasses, and most other crops.

NUTRAPLEX FIRM-UP is a complexed liquid micronutrient for foliar and soil application to agricultural crops. NUTRAPLEX FIRM-UP is beneficial in combination with plant food and non-phytotoxic when used as directed. It is absorbed through the leafy tissue and root system of the plant and quickly translocated within the plant. NUTRAPLEX FIRM-UP is compatible with most insecticides, fungicides, herbicides, liquid fertilizer, and other foliar micronutrients. It is used on most field and row crops, trees, vines, turf, and ornamentals. NUTRAPLEX FIRM-UP can also be used as an acidifying and dispersing agent in water solutions.

NUTRAPLEX micronutrients have corrected deficiencies of a great many row crops, vegetables, and ornamental plants under soil conditions ranging from high organic matter (muck) to very low organic matter and from strong acid soils (pH 3) to high alkaline soils (pH 8.5) containing considerable calcium carbonate (free lime). NUTRAPLEX can be effective under most varied farming conditions. Differences in soil conditions, climate and plant varieties will determine how much more effective NUTRAPLEX micronutrients are than other sources of micronutrients.

NUTRAPLEX micronutrients are unique in that they can be used in most forms of liquid fertilizers including ammonia solutions. NUTRAPLEX micronutrients can be broadcast on the surface of the soil in water solutions, in fluid fertilizers including suspensions, or in particulate form. This micronutrient can be banded at planting time, side dressed, or sprayed in water solutions directly on deficient plants. Under irrigation, NUTRAPLEX micronutrients can be added to the water of gravity and sprinkler systems. Under dry land conditions, NUTRAPLEX micronutrients can be applied ahead of disking, plowing or listing. When applied to soil, NUTRAPLEX micronutrients can be used in combination with a nitrogen fertilizer source.

DIRECTIONS FOR USE

Tomato, Cucumbers, Melons, Peppers, etc. - 1 to 3 quarts/acre per application every 7 to 14 days after fruit initiation and up to harvest.

Lettuce, Cabbage, Celery, etc. - 1 to 2 quarts/acre every 10-14 days during the maturity period.

Deciduous (Apples, Peaches, etc.) - 2 to 3 quarts/acre beginning when fruit is approximately 1/4 inch in diameter. Repeat applications every 20-30 days. Apply in adequate gallons to assure coverage.

Strawberries - 2 to 3 pints/acre starting at fruit initiation and one application per week thereafter until harvest period.

Other Fruit Crops -1 to 2 quarts/acre per application as needed.

Nutraplex is a Registered Trademark of Western Nutrients Corporation.

WARNING

This product can expose you to chemicals including Cobalt Sulfate, which is known to the State of California to cause birth defects or other reproductive harm.
