

DRIP INN NUTRIENTS CALCIUM BOOSTER

5-0-0

COMPLEXED MICRONUTRIENT
To Prevent and Correct Micronutrient
Deficiencies

GUARANTEED ANALYSIS

Total Nitrogen (N).....	5.00%
5% Nitrate Nitrogen	
Calcium (Ca).....	6.00%

Derived from calcium nitrate.
Complexing agent is a Lignosulfonate.

Information regarding the contents and levels of metals in this product is available on the internet

PRODUCT INFORMATION

CROPS:

DRIP INN can be applied to most vegetable crops, row crops, deciduous fruit and nut trees, citrus, avocados, grapes, melons, ornamentals, turf, pasture, range grasses and most other crops.

DRIP INN is a complexed liquid micronutrient for foliar and soil application to agricultural crops. DRIP INN is beneficial in combination with plant food and non-phytotoxic when used as directed. It is absorbed through the leafy tissue and root system of the plant and can be translocated within the plant. DRIP INN is compatible with most insecticides, fungicides, herbicides, liquid fertilizer, and other foliar micronutrients. It is used on most field and row crops, trees, vines, turf and ornamentals. DRIP INN can also be used as an acidifying and dispersing agent in water solutions.

DRIP INN micronutrients have corrected deficiencies of a great many row crops, vegetables, and ornamental plants under soil conditions ranging from high organic matter (muck) to very low organic matter and from strong acid soil (pH 3) to high alkaline soil (pH 8.5) containing considerable calcium carbonate (free lime). DRIP INN can be effective under most varied farming conditions. Differences in soil conditions, climate and plant varieties will determine how much more effective DRIP INN micronutrients are than other sources of micronutrients.

DRIP INN micronutrients are unique in that they can be used in most forms of liquid fertilizers including ammonia solutions. DRIP INN micronutrients can be broadcast on the surface of the soil in water solutions. In fluid fertilizers including suspensions, or in particulate form. This micronutrient can be banded at planting time, side dressed, or sprayed in water solutions directly on deficient plants. Under irrigation, DRIP INN micronutrients can be added to the water of gravity and sprinkler systems. Under irrigation, DRIP INN micronutrients can be applied ahead of disking, plowing or listing. When applied DRIP INN micronutrients can be used in combination with a nitrogen fertilizer source.

APPLICATION RATES

SOIL APPLICATION RATES:

Drip Systems and Drip Tape:

1 – 8 quarts (1 – 8 liters) per acre, application depending on the crop and its growth stage. If a pre plant fertilizer is used, a total of 2 – 5 gallons (8 – 19 liters) DRIP INN CALCIUM BOOSTER is recommended. If a pre plant fertilizer is not used a total of 5 – 10 gallons (10 – 38 liters) per acre throughout the growing season is recommended.

Sprinkler Systems and Flood Irrigation:

These systems are not as effective for fertilizer application as drip systems. For best results, follow drip recommendations. A pre plant or side dress application often is required for this type of irrigation system.

Foliar Application and Air or Ground Rig:

Tree Crops	1– 2 quarts per acre
Vegetable Crops	1– 4 pints per acre
Field Crops	1– 4 pints per acre

Dilution Rates:

Use a minimum of 10 gallons (38 liters) of water per acre.
