PRODUCT INFORMATION

CROPS

DRIP INN HP-30 Liquid Nutrients can be applied to most vegetable crops, row crops, deciduous fruit and nut trees, citrus, avocados, grapes, melons, ornamentals, turf, pasture, range grasses, and most other crops.

DRIP INN HP-30 is a new liquid plant food developed for use as a foliar feed, a regular plant food applied to the soil, and as a starter plant food with the seed or transplant.

HP-30 liquid nutrients contain **ENHANCE* (THA) Technical Humic Acids**. **HP-30** nutrients are beneficial in combination with plant food and non-phytotoxic when used as directed.

HP-30 nutrients with (THA) Technical Humic Acids are unique as they can be used in most all forms of liquid fertilizers. **HP-30** nutrients can be banded at planting time, side-dressed or sprayed in water solutions directly on deficient plants. Humic Acids may aid in the uptake of micronutrients.

TURF GRASSES

One gallon (4 liters) per 5000 square feet applied with sufficient water to insure uniform distribution. May be applied every 30 to 60 days during growing season. Supplemental nitrogen should be added as recommended by your supplier and/or Pest Control Advisor.

TRANSPLANT SOLUTIONS AND DRENCHES

Mix thoroughly one to two gallons in not less than 100 gallons of water and drench roots. For vegetables drench entire plant. Plan immediately after drenching. Do not allow plants to dry or wilt. Total amount of **HP-30** used should not exceed 3 gallons (11 liters) per acre regardless of amounts of water used in transplanting.

Remember, these humic acid products are used to **FORTIFY, PRODUCE, SET and HOLD**. It is important that timely applications are made to achieve these results.

APPLICATION RATES

SOIL APPLICATION RATES

Drip Systems and Drip Tape — 1-8 quarts (1 - 8 per acre, application depending on the crop and its growth stage. If a preplant fertilizer is used, a total of 2-5 gallons (8-19 liters)

DRIP INN HP30 is recommended. If a pre plant fertilizer is not used a total of 5 - 10 gallons (19 - 38 liters) per acre throughout the growing season is recommended.

Sprinkler systems — Flood Irrigation — These systems are not as effective for fertilizer application as drip systems. For best results, follow drip recommendations. A pre plant or side dress application often is required for this type of irrigation system.

Foliar Application — Air or Ground Rig

Tree Crops - 1-2 quarts per acre
Vegetable Crops - 1-4 pints per acre
Field Crops - 1- 4 pints per acre

DILUTION RATES - Use a minimum of 10 gallons (38 liters) of water per acre.
