DIRECTIONS FOR USE:

Fill your reservoir with clean water before administering any nutrient or additive. Make sure that the water level in your reservoir is sufficient enough to effectively flood your desired area or table. Always wash your measuring cup immediately after adding and stirring in each nutrient. Never mix any nutrients together in their concentrated form. After adding and stirring in each nutrient, check and adjust the pH between 5.0 and 6.5. Keep the water temperature in your reservoir between 66 and 75 degrees F. Drain your reservoir and pumps at least once a week to prevent any salt buildup. Please avoid storing in direct sunlight and protect from freezing.
