PRODUCT INFORMATION

LIQUA-JIP®K is designed to provide a safe, soluble and reliable form of calcium ion that may be metered directly into the irrigation water.

DIRECTIONS FOR USE

General AG Rates:

With increased calcium ion concentration in the soil solution, this nutrient is made more available for plant uptake. A general use rate for **LIQUA-JIP®K** starts with the first irrigation at 5 gallons per acre. This application will last through 3 irrigations. Apply 5 gallons **LIQUA-JIP®K** per acre with each third irrigation until harvest. A general use rate over the growing season is a total of 10-15 gallons **LIQUA-JIP®K** per acre.

LIQUA-JIP®K should be applied by injecting into the irrigation water. The rate of application should be slow and applied over the entire set. **LIQUA-JIP®K** can be diluted with water to achieve this. It is very important to add **LIQUA-JIP®K** during the entire irrigation set. **LIQUA-JIP®K** can be cut with water to create enough volume to treat the entire set.

LIQUA-JIP®K does best when **Penmax®** is added to the irrigation set. **PENMAX®** can be added with **LIQUA-JIP®K** or on the next irrigation.

GOLF COURSE

General Golf Course Rate - For injection:
55 gallons per 10 acres applied over a 30 day period.

Fairways - 5 -10 gallons per acre, use enough dilution for maximum coverage.

Greens -5 - 15 ozs. Per 1000 sq. ft., use enough dilution for maximum coverage.

Turf - For problem spots on turf areas, apply 1/2-1 gallon of **LIQUA-JIP®K** in 15-25 gallons of water to 1000 sq. ft. in 2 separate applications, 2 to 3 days apart. Irrigate in a.m. daily with minimum run off for 5 days or until soil moisture level has been replenished.

LIQUA-JIP® and **PENMAX®** are Registered Trademarks of Western Nutrients Corporation .
